See! I've never had good success with those USB Adapters...

FYI,

DeMento in Agony Mountains

Thanks for the response.
It is an issue with an emulator which for some reason I cannot get to work. Easiest is to change computers to one with a com port so that is next.

Thanks again
Bob Bernauer

Subject: Re: Fw: tech question about peak simple

Bob,

If you have the Manunal... this is covered in the beginning of thPeak-Simple Section... and means you do not have the correct Comm-Port selected and the GC / PC cannot communicate.

You have to press several times and then "OK" when the "ACQUISITION" Screen pops up with the count-down Timer to EXIT this mode... then go into "EDIT", "OVERALL" and select the proper Comm-Port. Always SAVE the updated "Control File" whenever you make a change... as these are the parameters that are loadedwith the Software.

I am enclosing one of my Mini-Guides for the GC / Peak-simple Operation if you do not have a chance to go through the complete Manual (and please reply to JOHN@BUCKSCI.COM if you do not have the Manual and he'll get one out to you).

Are you using an ACTUAL Comm-Port or a "Virtual Adapter" on a USB Port... as the latter often does not provide TRUE EMULATION of an RS-232 Serial Port. Maybe your WXp is having a problem if using an Emulator, as well. Call John at BUCK (800-562-5566) if this is the case.

Call me, too, if you still have these set-up problems... as usually we have no difficulties when new Users start up with the proper conditions... and I'm running around the Mid-West to the North-East covering the Natl ACS / Chicago, NSTA / St. Louis, Freshman Gen Chem / U. of Cincinnati, Science-in-Motion Workshop / OSU-Columbus and tomorrow at Juniata College in the middle of the PA Pcono mountains... so will get a Phone Call before my E-Mail for a few days.

Regards,

Dr. Jerry DeMenna, Ph.D.

Subject: tech question about peak simple

I'm on the learning curve with the peak simple software and the model 910 GC we recently purchased.

Every 15 seconds or so a window pops onto the screen with the heading;

Data Acquisition System
And it keeps
Waking up
Signing on
Setting modules
Calibrating

While this occurs I have no input available which is very inconvenient if I have just injected and want to run the program.

Is this normal for the software?

Thank you
